

## **How to Sideload a Kindle Book**

You will need to “sideload” my book to read in order to read it on your Kindle device (or app).

It’s not that hard to sideload a book. Simply follow these steps:

**Step 1:** Download the .Mobi file from the email I send to you.

**Step 2:** When prompted, save the .Mobe file to your hard drive on your desktop or laptop.

**Step 3:** Connect your Kindle to your computer with the USB cable.

**Step 4:** Open the finder/filemanager/windows explorer (this is the menu that lists drives and folders)

**Step 5:** You will see a new device on the left called KINDLE (or a similar description)

**Step 6:** Inside the new device there is a section that looks similar to this: */my files/documents folder*

**Step 7:** Find the .Mobi file that you downloaded, and copy it to the */my files/documents folder* (or drag and drop it)

**Step 8:** Open your Kindle and it should be there, ready to read.

Use this YouTube tutorial if you get stuck:
